Assignment 5

"Atmospheric Phenomena" (continued); "Climatology and World Weather." Textbook Assignment: Pages: 5-1-6 through 6-3-4.

Learning Objective: Identify the various forms of fog.

- 5-1. Which of the following facts about fog is incorrect?
 - 1. Fog is most easily described as a cloud at the Earth's surface
 - 2. All fogs are composed of minute water particles only
 - particles only

 3. Fog depth and density are quite variable
 - 4. Local geography and topography can play a major role in the formation and dissipation of fog
- Where and when is the formation of 5-2. radiation fog most common?
 - 1. Over cold waters at night
 - Over land at night
 - 3. Over land in the early afternoon
 - 4. Over coastal waters in the early morning
- How does wind speed affect radiation foq?
 - 1. Calm winds cause a shallow fog layer to form
 - 2. Winds of 5 to 10 knots create turbulent currents that increase the depth of the fog
 - 3. Winds greater than 10 knots usually cause the fog to lift, thereby forming low scud, stratus, or stratocumulus
 - 4. All of the above

- 5-4. Which of the following conditions is most conducive to the formation of radiation fog?
 - 1. Low pressure, light winds, and overcast skies
 - overcast skies

 2. Low pressure, light winds, and clear skies
 - 3. High pressure, light winds, and clear skies
 - 4. High pressure, light winds, and overcast skies
- 5-5. What are advection fogs?
 - 1. Fogs produced by the movement of warm air over a colder land or water surface
 - 2. Fogs that form in the clear night air over warm waters
 - 3. Fogs produced across air mass frontal boundaries
 - 4. Fogs of the tropics
- 5-6. Which of the following types of fog is not classified as advection fog?

 - Sea fog
 Arctic sea smoke
 - 3. Upslope fog
 - 4. Steam fog
- 5-7. Most fog is destroyed (lifted) when the wind speed over a fog enshrouded area increases. Which of the following classifications/types of fog is most likely to persist in wind up to 26 knots?
 - 1. Land advection fog
 - 2. Sea fog
 - 3. Upslope fog
 - 4. Radiation fog

- 5-8. Which of the following classifications/types of fog is most likely to occur in winter, when an arctic outbreak pushes off the U.S. east coast over warm Gulf Stream waters?
 - 1. Sea fog
 - 2. Steam fog
 - 3. Land advection fog
 - 4. Radiation fog
- 5-9. Which of the following statements concerning frontal fog is correct?
 - 1. Frontal fog is the result of evaporation of falling rain
 - 2. It forms in the cold air mass
 - This fog begins as low clouds that eventually lower to the ground
 - 4. Each of the above
- 5-10. On some mornings, grass, plants, and possibly your car will be wet with dew while the road and some large objects will be dry. Why do some surfaces remain dry?
 - 1. Micro air temperature differences
 - 2. Micro dew point variations
 - Some surfaces retain heat longer and fail to cool to the dew point
 - 4. Some surfaces cool far too fast for the moisture to accumulate on them
- 5-11. Which of the following hydrometers occurs when supercooled water droplets strike exposed objects at temperatures at or below freezing?
 - 1. Hoarfrost
 - 2. White dew
 - 3. Glaze
 - 4. Rime
- 5-12. With regard to classification, how does spray differ from blowing spray?
 - 1. Wind speed
 - 2. Visibility
 - 3. Wave heights
 - 4. Droplet size
- 5-13. Tornadoes travel at what average range of speed?
 - 1. 0 to 5 knots
 - 2. 7 to 15 knots
 - 3. 12 to 20 knots
 - 4. 22 to 34 knots

- 5-14. Which of the following areas is most conducive for the formation of tornadoes?
 - 1. Cols
 - 2. 30 miles to the rear of short-wave troughs
 - 3. 75 to 180 miles in advance of fast-moving cold fronts
 - In areas of warm air overrunning cold air
- 5-15. Which of the following conditions is NOT indicative of tornado formation?
 - Strong convergent winds at the surface
 - Suppressed convection up to the minus 10°C isotherm
 - 3. Marked convective instability
 - 4. Strong horizontal wind shear
- 5-16. Upon observing the development of a water spout, how can an observer tell, if it is of the local or tornadic variety?
 - 1. Size
 - 2. Stability index
 - 3. Development process
 - 4. Vertical extent of convective clouds

Learning Objective: Identify the characteristics of lithometeors (haze, smoke, dust, sand, and dust devils).

- 5-17. Which of the following lithometeors reduce(s) visibility in a veil-like cover?
 - 1. Smoke
 - 2. Dust storms
 - 3. Haze
 - 4. Sand storms

IN ANSWERING QUESTIONS 5-18 THROUGH 5-21, MATCH THE LITHOMETEOR IN COLUMN B WITH THE CHARACTERISTICS IN COLUMN A.

A. CHARACTERISTICS

B. LITHOMETEORS

- 5-18. Appears yellowish or orange when viewed against a bright background
- Dust devils

Haze

- 5-19. Created by intense surface heating and steep lapse rate
- 3. Smoke

4. Dust

- 5-20. Causes the Sun's disc to appear red in
- the morning and evening 5-21. Makes distant objects

appear tan or gray

- 5-22. Your station's visibility markers are set at 1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/2, 2, 2 1/2, 3, 4, 5, 6, 7, and 15 miles. What is the maximum distance (by marker) that your observer will be able to see in a severe dust storm?
 - 1/8 mi
 - 2. 1/4 mi
 - 3. 3/8 mi
 - 4. 1/2 mi

Learning Objective: Identify the character and characteristics of light and describe reflection and refraction.

- 5-23. Which of the following statements is NOT a characteristic of photometeors?
 - 1. They appear as luminous patterns in the sky
 - 2. Many are cloud related
 - 3. They help in describing the state of the atmosphere
 - 4. They are all precursors of bad weather
- 5-24. When light encounters any substance, which of the following occurrences might take place?
 - 1. Refraction only

 - Reflection or refraction
 Absorption or refraction
 Absorption, reflection, or refraction

- 5-25. Visible light occupies that portion of the electromagnetic spectrum between
 - 4000 and 7000 angstroms
 - 2. 2500 and 4000 angstroms
 - 1200 and 2500 angstroms 3.
 - 4. 400 and 1100 angstroms
- 5-26. How does the Moon produce moonlight?
 - 1. It is a luminous body and produces its own light
 - It absorbs light from the Sun and regenerates it at night
 - It reflects the light it receives from the Sun
 - Through a combination of reflection, absorption, and refraction
- 5-27. A substance permits the passage of light through it, but the light appears clouded, and viewing things through such a substance is impaired. This substance is described as being
 - transparent 1.
 - 2. translucent
 - 3. opaque
 - fluorescent
- An object that allows virtually 100 5-28. percent of the light striking it to pass through exhibits the property of
 - 1. opacity
 - 2. translucency
 - transparency 3.
 - absorptivity
- 5-29. When none of the light waves that strike a medium pass through it, the medium is termed
 - opaque 1.
 - 2. absorbent
 - translucent 3.
 - transparent
- 5-30. A ray of light striking a mirror perpendicularly is referred to as the
 - angle of reflection
 - 2. angle of refraction
 - normal
 - 4. reflected light
- 5-31. What is the term given to the angle between a reflected light ray and a perpendicular light ray?

 - Angle of incidence
 Angle of reflection
 - 3. Angle of refraction
 - 4. The normal angle

- 5-32. When light passes through a medium that changes the direction of the light, the light is being
 - 1. refracted only
 - 2. reflected only
 - 3. reflected or refracted
 - 4. absorbed and reflected
- 5-33. When a light ray passes from one medium into another of greater density at an angle of 45 degrees, how is the light ray affected?
 - It slows and bends away from the normal
 - It slows and bends toward the normal
 - 3. It is reflected at a 45 degree angle
 - 4. It slows, but its path is not altered
- 5-34. What are the six distinct colors of the visible spectrum?
 - Red, orange, yellow, green, blue, and brown
 - Yellow, green, blue, orange, violet, and red
 - Blue, green, yellow, orange, black, and white
 - White, black, gray, yellow, blue, and red

Learning Objective: Identify the characteristics of photometers (halos, coronas, rainbows, fogbows, mirages, looming, scintillation, and crepuscular rays) .

- 5-35. Halos are almost exclusively associated with which of the following cloud forms?
 - 1. Cumuliform
 - 2. Stratiform
 - 3. Cirriform
- 5-36. Which of the following differences distinguishes coronas from halos?
 - Coronas are usually much larger than halos
 - The outer ring of a corona is red, while a halo's is violet
 - Coronas are formed by refraction of light through ice crystals, while halos are caused by the diffraction of light by water droplets
 - 4. Coronas form around the Sun and Moon while halos form only around the Sun

- 5-37. What color is usually seen on the outer arc of a rainbow?
 - 1. Blue
 - 2. Red
 - 3 Yellow
 - 4. Green
- 5-38. Mirages are produced when light is
 - absorbed in a very dense cold air mass
 - reflected off a very hot surface such as a desert
 - refracted when passing through layers of air with highly different densities
 - reflected, refracted, and diffracted in hot air
- 5-39. What is the term given to the phenomena that causes stars near the horizon to twinkle and change color?
 - 1. Iridescence
 - 2. Looming
 - 3. Superior mirage
 - 4. Scintillation
- 5-40. What is "looming"?
 - An atmospheric phenomenon that causes objects over the horizon, which would otherwise not be seen, to become visible
 - A phenomenon that causes stars to twinkle and change color near the horizon
 - 3. An inferior mirage
 - 4. A form of iridescence
- 5-41. A luminous beam of sunlight passing through a break in the clouds and extending to the Earth like a spotlight is known as
 - 1. iridescence
 - 2. scintillation
 - 3. a crepuscular ray
 - 4. a sunstroke

Learning Objective: Identify the characteristics of electrometers (thunderstorms, lightning, auroras, and airglow).

- 5-42. Which of the following atmospheric conditions is necessary for the formation of thunderstorms?
 - 1. High temperatures and contrasting air masses
 - 2. Conditionally stable air and high humidity
 - 3. Moist, conditionally unstable air and a lifting mechanism
 - 4. A weak horizontal temperature gradient, low-level turbulence, and high humidity
- 5-43. Which of the following statements is true concerning the makeup of thunderstorms?
 - 1. They consist of only one convective cell
 - 2. A cell's life cycle usually lasts 1 to 3 hours
 - 3. There are three distinct stages in the life cycle of a cell
 - 4. In the initial stages of development updrafts prevail throughout the cell
- 5-44. Which of the following lapse rates would most likely NOT be found in a thunderstorm?
 - .45/100 meters
 - 2. .75/100 meters
 - 3. 7.0 /1000 meters
 - 4. 7.5 /1000 meters
- 5-45. What is considered to be the most hazardous level for flying in a thunderstorm?
 - The base
 - 2. The middle level
 - 3. The upper level
 - 4. The freezing level
- The stronger the turbulence in a thunderstorm, the less intense the precipitation.
 - 1. True
 - 2. False
- 5-47. Which of the following statements concerning the winds associated with thunderstorms is correct?
 - Microbursts, macrobursts, and first gusts occur in all convective cells
 - 2. Microbursts are produced by violent updrafts
 - 3. The wind speed of the first gust is usually the highest recorded in a storm
 - 4. Macrobursts normally last 2 to 3 hours

- 5-48. What is the Earth's normal electrical field?
 - 1. Ground negative and air positive
 - Ground positive and air negative
 - 3. Ground and air both positive
 - 4. Ground and air both negative
- 5-49. Within a thunderstorm cloud, where is lightning most frequently encountered?
 - 1. Several thousand feet below the freezing level
 - 2. At the freezing level

 - 3. Between the freezing level and 15°F 4. Between the freezing level and the base of the cloud
- 5-50. Auroras most commonly occur
 - 1. in thunderstorms
 - 2. near the Earth's magnetic poles
 - 3. when rarefied gases invade the lower atmosphere
 - 4. near the equator
- 5-51. Which of the following factors distinguishes airglow from an aurora?
 - 1. Airglow is fainter
 - 2. Airglow does not shimmer as much as an aurora
 - 3. Airglow appears in middle and lower altitudes, while auroras are a feature of high altitudes
 - 4. Each of the above

Learning Objective: Differentiate between climate and climatology; describe the climatic elements of temperature, precipitation, and wind; and define terms used to express climatic elements and the methods used to derive these terms.

- Which of the following definitions best 5-52. describes climate?
 - 1. The scientific study of the weather of a region
 - 2. The sum total of the Earth's atmospheric variables
 - 3. The average state of the Earth's atmosphere over any given location over a long period of time
 - 4. The general weather of a region

- 5-53. Which approach to climatology provides the *most* useful information to Aerographer's Mates in their travels around the world?
 - 1. Physical climatology
 - 2. Descriptive climatology
 - 3. Dynamic climatology
 - 4. Mesoclimatology
- 5-54. Which of the following types of climatic studies is usually likely be used to position runways for a new naval air station?
 - 1. Microclimatology
 - 2. Mesoclimatology
 - 3. Macroclimatology
 - 4. Physical climatology
- 5-55. Of the following climatic elements, which is considered to be the most important?
 - 1. Pressure
 - 2. Temperature
 - 3. Wind
 - 4. Precipitation
- 5-56. Moisture modifies temperature, while, at the same time, it is also influenced by temperature.
 - 1. True
 - 2. False
- 5-57. In most countries of the world, the amount of precipitation in climatic studies is expressed in what increments?
 - 1. Inches
 - 2. Centimeters
 - 3. Millimeters
 - 4. Centiliters
- 5-58. What are resultant winds?
 - The wind directions and speeds for a given level in the atmosphere
 - The vectorial average of all wind directions and speeds for a given period of time
 - The vectorial average of all wind directions and speeds for a given period of time, at a specific place
 The wind directions and speeds for a
 - The wind directions and speeds for a specific place

- 5-59. Which of the following climatic terms is being determined when the highest and lowest temperatures of the day are added together and divided by 2?
 - 1. Mean
 - 2. Mode
 - 3. Median
 - 4. Normal
- 5-60. The extreme lowest temperature ever recorded at your station is -22°F. Which of the following climatic terms applies to this temperature?
 - 1. Extreme low
 - 2. Absolute low
 - 3. Absolute minimum
 - 4. Extreme absolute minimum

IN ANSWERING QUESTIONS 5-61 THROUGH 5-64, MATCH THE CLIMATIC TERMS IN COLUMN B WITH THE DEFINITIONS LISTED IN COLUMN A.

A. DEFINITIONS CLIMATIC TERMS 5-61. Extreme highest and Extreme lowest values recorded for any given meteoro- 2. Mode logical element 3. Median 5-62. value at the midpoint of an array 4. Absolute 5-63. Value occurring with the greatest frequency Hiahest or lowest value 5-64. of a particular element over a given period of time

- 5-65. What temperature is normally used as the standard base temperature in computing heating degree days?
 - 1. 85°F
 - 2. 75°F
 - 3. 65°F
 - 4. 60°F

- On the first day of your local power company's heating season, five heating degree days are measured. What does this number represent?
 - The number of kilowatts of energy used above the average number required to cool to a standard temperature
 - The difference between the first day's mean temperature and a
 - temperature standard
 3. An index of required energy
 - 4. Standard deviation
- 5-67. Which of the following statements is correct with regard to average and standard deviation?
 - (+ or -) signs are critical in these computations
 - Average deviations use arithmetic averages of data, while standard deviations use actual measurements
 - 3. A standard deviation is the square root of an average of squared mean deviations

IN ANSWERING OUESTIONS 5-68 THROUGH 5-75, USE THE FOLLCWING MONTHLY INFORMATION. (HIGHS AND LOWS ARE DEGREES FAHRENHEIT) .

<u>February</u>	<u>High</u>	Low	<u>February</u>	<u>High</u>	Low
1	41	21	15	27	11
2	39	21	16	25	09
3	39	19	17	25	10
4	29	15	18	26	11
5	27	12	19	18	05
6	30	13	20	16	03
7	32	15	21	16	04
8	37	19	22	17	08
9	37	21	23	19	13
10	40	23	24	23	14
11	40	26	25	26	16
12	41	27	26	29	18
13	39	19	27	32	21
14	37	16	28	33	22

- 5-68. What is the mean high temperature (rounded off) for the month?
 - 37°
 - 320 2.
 - 3. 30°
 - 26°

- 5-69. What is the range of the high temperatures?
 - 24° to 26″
 - 2. 41° to 29°
 - 3. 30"
 - 25" 4.
- 5-70. What is the extreme mean monthly temperature?

 - 1. 15° 2. 22°
 - 3. 31°
 - 4. 32°
- 5-71. What is the mode of the low temperatures?
 - 1. 15°
 - 2. 19°
 - 21° 3.
 - 270
- 5-72. What are the medians of the high and low temperatures?
 - 29.0 and 15.0"
 - 2. 29.5 and 15.5°
 - 3. 30.0 and 15.5°
 - 4. 32.0 and 16.0°
- 5-73. When you use 41°F as the standard, what is the number of degree days for the first seven days of the month?
 - 1. 71
 - 2. 86
 - 3. 109
 - 4. 133
- 5-74. What is the average daily temperature deviation?
 - 1. 6°
 - 2. 7°
 - 3. 8°
 - 4. 9°
- 5-75. What is the standard deviation (rounded off) of the temperature for the month?
 - 1. 6°
 - 2. 7°
 - 3. 8°
 - 4. 9°
